

PLUMBIFY AI SALES TEAM

Weekly Operations & Funnel Performance Report • June 22, 2026

1. Funnel Performance Metrics

Metric Name	Count	Funnel Stage
Total Harvested Leads	2	Ingested
Leads with Emails	1	Email Track
Leads with Phone Only	1	SMS Track
AI Outreach Drafted	1	Drafted in GHL Notes
Pending AI Outreach	0	In Queue
Replied Leads (Warm)	0	Engaged
Demos Booked	0	Converted (Goal)

2. Executive Summary & AI Analysis

This week's AI Sales Agent performance shows critical underproduction at the top of our sales funnel. We harvested only 2 leads, evenly split between email and phone-only contacts, representing a 1:1 ratio. Only one outreach copy was drafted, indicating significant missed opportunities for engagement. Consequently, our outreach-to-reply and reply-to-demo conversion rates stand at 0%.

The primary bottleneck is the extremely low volume of harvested leads and the subsequent lack of initiated outreach. With only one lead having a drafted message, we have insufficient activity to generate any meaningful data or conversions. The issue isn't conversion deeper in the funnel, but the near-complete absence of initial engagement.

For next week, I recommend two urgent actions: First, drastically increase lead harvesting volume to a minimum of 50 quality leads. Second, implement strict protocols to ensure 100% of harvested leads move promptly into the outreach drafting and initiation stages. This focus on expanding top-of-funnel activity is essential to create pipeline velocity and gather actionable performance data.

3. Operational Recommendations

- **Improve Email Coverage:** If phone-only leads are high, cross-reference with LinkedIn or Apollo to fetch emails before attempting cold SMS.
- **Trigger Automated Sequence:** Transition tags from 'outreach-drafted' to trigger GHL native email sequences for contacts that pass manual review.
- **Vapi Warm Integration:** Configure an automation to trigger a Vapi voice call 5 minutes after a lead opens the outreach email.
